## Technical sheet

Comment: \_\_\_\_\_

| Property           | Value              |
|--------------------|--------------------|
| MTQ compliance     | T-RV-10 certified  |
| Material           | Polyethylene       |
| Length             | 47 po (1200 mm)    |
| Bollard diameter   | 3 po (76 mm)       |
| Base diameter      | 8 po (200 mm)      |
| Colour             | Orange             |
| Reflective band    | ASTM D4956 Type IV |
| Approximate weight | 2 kg (4.5lb)       |

### Description

**This flexible, deformable bollard is a traffic control and road safety device that meets the T-RV-10 certification of the Quebec Ministry of Transportation (MTQ). It is designed to mark out traffic lanes, protect pedestrians and infrastructure, and absorb impacts by deforming temporarily to minimize damage.**

Its high flexibility lets it bend easily and return to its original shape after a collision. It is also **UV resistant thanks to an anti-UV coating**, giving greater durability under sun exposure and keeping its colour and mechanical properties.

The reflective bands meet the ASTM D4956 standard, ensuring high retroreflection and optimal visibility at night and in low light. The bands are also mechanically protected from tearing off by a slight **recess in the bollard profile.**

| <b>Technical sheet</b>                                                           | Comment: _____                        |                   |
|                                                                                  |                                       |                   |

## Benefits

- MTQ T-RV-10 compliance: meets the strict requirements of the Quebec Ministry of Transportation for road delineation devices.
- Customizable: you can add your own logo or preferred signature.
- **High visibility:**
  - Excellent 360° visibility, so drivers and pedestrians see it better.
  - High-intensity reflective film for safety and visibility at night.
- **Durability and strength:**
  - Resists weather, impacts and ageing.
  - Suited to extreme temperatures, from -30°C to 45°C.
  - The polyethylene column resists UV rays
- **Safety and stability:**
  - Non-slip, absorbs impacts and stays stable on uneven surfaces.
  - Quickly returns to its original shape, even after being run over by a heavy vehicle, limiting damage and staying functional.
- **Installation and maintenance:**
  - Easy installation, usually bolted to the ground.
  - Low maintenance: does not need frequent servicing.
- **Cost-effective:**
  - Low replacement and repair costs.

## Applications

- Separating and marking traffic lanes (roads, highways, parking lots).
- Protecting pedestrian areas and bike paths.
- Guiding and channelling traffic.
- Marking out work and construction zones.
